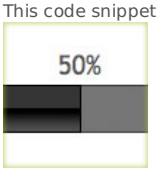
Adding a Guarana UI progress bar on a web page

Overview

This code snippet demonstrates how to add a progress bar on a web page using Guarana UI components. The progress bar component looks like this:



You can download the component library from Nokia Developer.

Source: Relevant HTML components

```
<head>
    <!-- Guarana UI style sheets -->
    <link rel="stylesheet"
        href="style/themes/themeroller/default-theme/ui.all.css"
        type="text/css" media="screen">

    <!-- Guarana UI scripts -->
    <script type="text/javascript" src="lib/jquery/jquery.js"
        charset="utf-8"></script>
    <script type="text/javascript" src="lib/guarana/defaults.js"
        charset="utf-8"></script>
    <script type="text/javascript" src="lib/guarana/core.js"
        charset="utf-8"></script>
</head>
<body>
    <div id="bodyContent" class="bodyContent">
        <div id="progressBar"></div>
    </div>
</body>
```

Source: JavaScript

```
Nokia.use("progressbar", init);

// Initializes the widget
function init() {
    window.progressBar = new Nokia.ProgressBar({
        element: "#progressBar",
        value: 30,
        label: true,
        complete: function(value) {
            displayNote("Complete!");
        }
    });
}
```

The `value` attribute specifies the initial value of the progress bar. If the `label` attribute is set to `true`, the value of the progress bar is displayed above the bar. The `complete` attribute defines a function which is called when the progress bar reaches the value of 100 %.

To get and set the value of the progress bar, call the `getValue()` and `setValue()` functions, respectively:

```
// Executes the snippet.
// Adds the value of the progress bar by 20 % until the value is 100 %.
function executeSnippet() {
    var newValue = window.progressBar.getValue() + 20;
    if (newValue > 100) {
        newValue = 100;
    }
    window.progressBar.setValue(newValue);
}
```

Note: The scroll component requires the following files from the library:

- `lib/jquery/jquery.js`
- `src/core.js`
- `src/defaults.js`
- `src/dom.js` (implicitly loaded by `core.js`)
- `src/util.js` (implicitly loaded by `core.js`)
- `src/device.js` (implicitly loaded by `core.js`)
- `src/animation.js` (implicitly loaded by `core.js`)
- `src/widget.js` (implicitly loaded by `core.js`)
- `src/progressbar.js` (implicitly loaded by `core.js`)
- `themes/nokia/base/base.css` (implicitly loaded by `core.js`)
- `themes/nokia/base/progressbar.css` (implicitly loaded by `core.js`)

- `themes/themeroller/default-theme/images/ui-icons_ffffff_256x240.png` (from `ui.theme.css`)

Postconditions

A Guarana UI progress bar is added on the web page. When **Options** > **Execute snippet** is selected, the value of the progress bar is increased in increments of 20 % until it is 100 %, after which the function specified by the `complete` attribute is called.

Supplementary material

This code snippet is part of the stub concept, which means that it has been patched on top of a template application in order to be more useful for developers. The version of the WRT stub application used as a template in this snippet is v1.2.

- The patched, executable application that can be used to test the features described in this snippet is available for download at Media:adding a guarana ui progress bar.zip.
- You can view all the changes that are required to implement the above-mentioned features. The changes are provided in unified diff and colour-coded diff (HTML) formats in Media:adding a guarana ui progress bar.diff.zip.
- For general information on applying the patch, see Using Diffs.
- For unpatched stub applications, see Example stub.
