ESWT is a deprecated UI framework. It is not present on Series 40 and on Symbian there are better maintained UI frameworks for most functionality (e.g. LWUIT). The only really "useful" API presently is the browser.

The Embedded Standard Widget Toolkit (ESWT) is an open source widget toolkit for Java designed to provide efficient, portable access to the user-interface facilities of the devices on which it is implemented. It is co-developed by Nokia, IBM and others in the eRCP Eclipse foundation project. It is supported on Symbian but not Series 40.
