

The "International Mobile Equipment Identity" (IMEI) is a number unique to every GSM and UMTS mobile phone. It is usually found printed on the phone underneath the battery and can also be found by dialing the sequence *#06# into the phone.

The IMEI is frequently used in mobile applications to identify a particular phone for licensing purposes.

The IMEI number is used by the GSM network to identify valid devices and therefore can be used to stop a stolen phone from accessing the network. For example, if a mobile phone is stolen, the owner can call his or her network provider and instruct them to "ban" the phone using its IMEI number. This renders the phone useless, regardless of whether the phone's SIM is changed.

Generally the IMEI number is of 14 to 17 digits.

IMEI format: XXXXXX XX XXXXXX X

TAC FAC SNR SP

- TAC = Type approval code
- FAC = Final assembly code
- SNR = Serial number
- SP = Spare
