Category:Qt

This category contains all Nokia Developer Wiki articles that have been tagged with the category **Qt** (or with sub categories including Qt Quick, Qt Mobility and Qt WebKit). It does not include topics that include Category:Qt C++ UI, as Qt Quick is recommended for mobile device UIs.

Qt is a cross platform technology and Qt applications are compatible with both Symbian and MeeGo/Maemo devices, as well as desktop platforms. If you're new to Qt, you can get started by downloading the Nokia Qt SDK. You should also see the information on the main Nokia Developer Qt page.

Qt SDK v1.2 is released (01 Feb 2012): The Qt SDK delivers a complete toolset that supports the creation of apps for the Nokia N9 and Symbian Anna and Belle phones. The Qt SDK 1.2 delivers Qt Creator 2.4.1 and enhanced tools for Symbian and Nokia N9 apps. For developers of desktop applications, Qt 4.8 is included.

For more information about the release see Qt SDK 1.2. You can download Qt SDK from here:Qt SDK

We currently have 753 Qt articles in this Wiki.

Symbian and MeeGo/N9-specific Articles

Qt is a cross platform development framework, and most code should run unchanged across platforms. The topics below have been tagged with only one platform tag indicating that they are platform dependent.

Symbian
