Guarana UI: a jQuery-Based UI Library for Nokia WRT

Introduction

This is the documentation of the Guarana UI - a jQuery-Based UI Library for Nokia WRT. Nokia WRT is a development and delivery platform that allows the creation of applications (widgets) based on standard web technologies, such as HTML, CSS, JavaScript, and AJAX. WRT Framework intends to offer developers a set of common components to create and deploy widgets in a friendly way. If you would like to know how to start developing with Nokia WRT, please visit Web Runtime QuickStart available in the Nokia Developer website.
The Guarana UI Library is a jQuery-based set of customizable UI elements, application frameworks, and templates that can be used for the creation of user interfaces in Nokia's Web Runtime platform.

2. Overview of Guarana UI

The WRT Framework is closely integrated with the jQuery library. The library uses the best practices of other libraries such as jQueryUI and ThemeRoller.

Click here for more details.

3. Download Guarana UI v1.1

The point to starting widget development using Guarana UI.

Click here to download Built Package (recommended).

Click here to download Full Package.

4. My first widget using Guarana UI

The point to understand how to use these components in your WRT widget.

Click here for more details.

5. Components Documentation

This wikipage includes the Components documentation for all developed components.

Click here for more details.

Guarana Community Contributions

Check out these pages to see what other people are doing with the Guarana UI:

- Guarana UI Component Browser. Thanks jappit for your excellent work on this!
